Powerfirm is a National IT Infrastructure provider with proven expertise and knowledge in:

- Physical Infrastructure Data Centre Architecture
- UPS Power and Cooling
- Power and Cable Management, Racking and Server Rooms
- IT Security Surveillance and Environmental Monitoring
- Physical Protection of Data Centres

Powerfirm's service and sales teams possess the in-depth knowledge needed to provide the right advice, service and solutions to clients. All team members have solid industry experience which enables them to better understand the IT issues faced by Australian businesses.

Powerfirm's client list includes many of Australia's major corporations and government bodies as well as small to medium businesses. Our clients benefit from working with people that have the required technical expertise and understand the business drivers behind IT projects and implementations. By partnering with an organisation that understands their business and IT requirements, Powerfirm's clients avoid risk, gain peace

of mind, and have access to valuable information, resources and support.

SERVICES

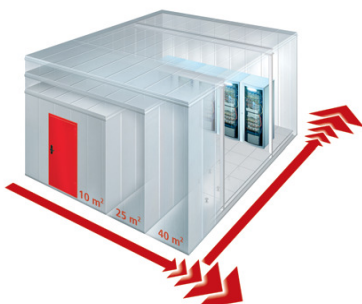

IT Audit & Assessment - Discover, document and assess the existing IT infrastructure. To ensure Powerfirm can get a handle on your IT environment, identify any areas that need urgent attention and assess the maturity, stability and performance of your IT infrastructure.

IT Remediation - Correct problems with existing infrastructure. Quickly address areas that need urgent attention and achieve a stable, secure, reliable IT environment that meets baseline industry standards.

IT Operational Maintenance - Maintain your IT Infrastructure. To ensure your IT infrastructure remains up-to-date, able to support business requirements, stable, secure and reliable.

Project Management - Physical Infrastructure Design & Implementation. Powerfirm can prioritise, plan, organise and execute:

- Data Centre Deployment Projects
- IT Security Room Builds
- Installation Services for UPS, Power & Cooling
- Data Centre Relocations and Consolidation
